

*** Before opening the flashing tool, make sure the drivers are already installed**

and restart your computer.

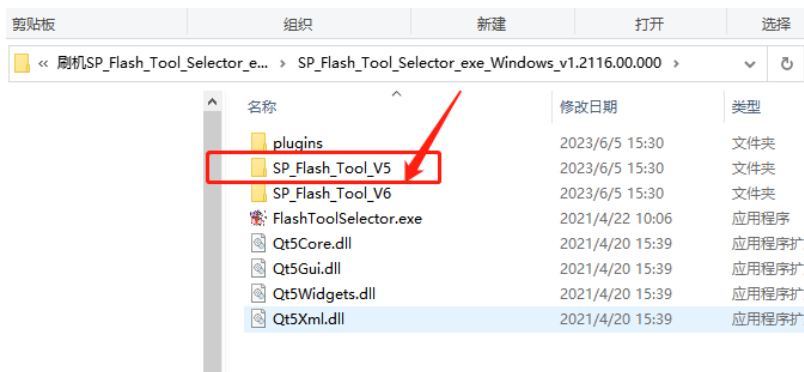

*** If the drivers keep failing to install, try flashing directly; some computers already have the drivers;**

*** If the driver interface stops when running, it's normal; it depends on your computer system. Some may take about half an hour. This is the official MTK system, not developed by our company.**

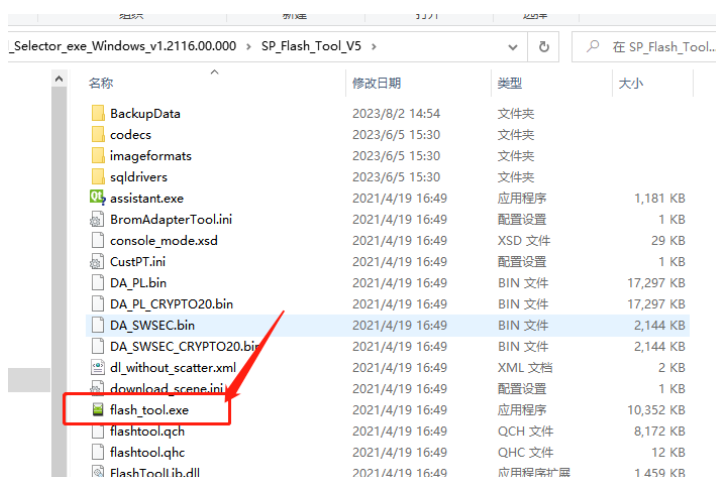

****Firmware upgrade, the device must be in an off state.****

Open the flashing toolkit, select V5 ;

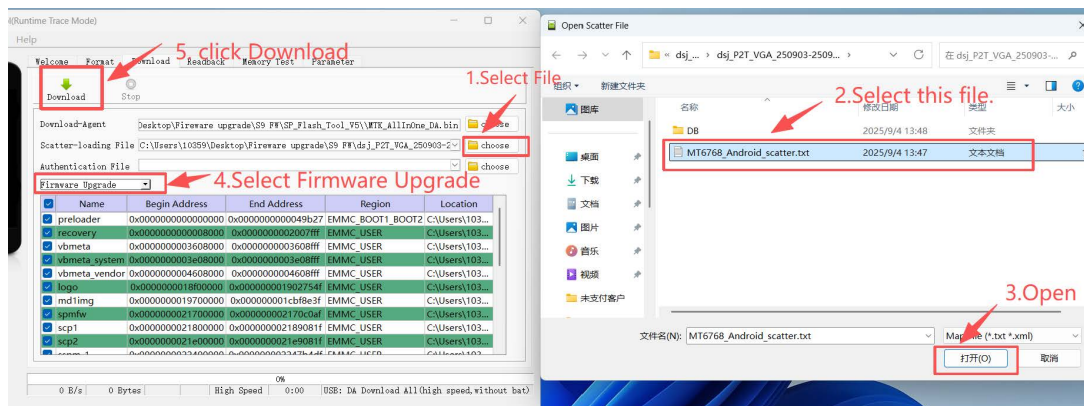

Double-click flash_tool.exe;

A flashing tool window will pop up, follow the 图 instructions;

(Firmware to be upgraded, save to your own computer, the software package must be extracted first to complete this screenshot operation)

After clicking download, then use the data cable to connect to the camera, it is estimated to take 1-2 minutes, with a progress bar displayed at the bottom;

Flashing successful - Download complete.
